## 1 Introduction

EG Engineering Company, Inc. provides for its customers comprehensive services in capital construction, ranging from engineering works such as project feasibility studies, arranging for all necessary permits, elaboration of design documentation, through selection of subcontractors for supply of technologies, goods and provision of services, erection and installation works, until commissioning and putting the unit into operation, i.e. securing start-up, individual and comprehensive testing run up to the actual handover of the Works, warranty and after sales service.

## 2 Relation to the Customer and to the product

- We are a company which focuses heavily on the Customer
- The goal of all our activities is always 100% compliance with all contractual commitments and efforts to meet the needs of the Customer through quality of our projects

## 3 Relation to the Company and the approaches grounded on the facts

- All activities are provided in accordance with applicable legal requirements and other requirements to which the company EG Engineering, Inc. committed its adherence and which relate to the internal and external aspects.
- The Company's management is committed to plan, implement and evaluate all activities and processes on the basis of collection and analysis of data.

## 4 Relation to the employees

- Each of our employees is convinced of the importance of the quality and of the conscious approach to protecting the environment for prosperity of the Company and is aware of his responsibility and his position in the system of quality management.
- Quality and responsible work of each employee is a guarantee of success of the Company.
- All our employees are and remain bearers of performance of our Company through comprehensive training, continuous education and management support.

## 5 Relation to external providers

- All our external providers are able to deliver exactly according to our needs and specifications.

We seek to have only reliable and high-quality external providers, and for this reason we evaluate them, select them and closely cooperate with them. We require from them to fulfill all their obligations arising from the contracts and thus fulfill our expectations.

## 6 System and process approach

- The Company's management is committed to periodically verify functionality of the implemented integrated management system.
- All the outputs from processes are monitored to ensure quality inputs to subsequent processes.
- The Company provides the necessary support to ensure operation of all processes, their measuring, monitoring and analyzing to achieve the planned results and continuous improvement.

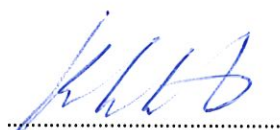

## 7 Relation to the environmental protection

- The environmental profile of the Company is regularly reviewed and improved and from the result new goals, targets and programs are set.
- The main objective of the environmental protection is minimization of potential accidents and their impacts to the environment by ensuring effective prevention and quick and correct response to occurred accidents or breakdowns.
- We are committed to the prevention (prohibition) of environmental pollution.
- We want to reduce waste production and increase their material or energy recovery.
- In addition, to the possible extent, we are striving to reduce energy and raw material consumption in our operations.

## 8 Continuous improvement

- With this approved and declared Quality Policy we are committed to continuously improve efficiency of the implemented system of integrated management.
- Changes in organization and management are focused on improving quality, environmental performance and production of the Company. Improving the quality and care of the environment is understood as a continuous and systematic process.
